

IQ Products

Since 1987, we are a primary manufacturer of ready-to-use antibodies (antibody combinations) and diagnostic kits for the detection of

- Human Leukocytes
- Human Cytokines
- Human Fetal Erythrocytes
- Apoptosis
- T cell responses
- Infectious diseases
- Sepsis

Our mission

Through the development and worldwide commercialization of innovative diagnostic applications in the fields of transplantation, perinatal diagnostics and routine flow cytometry IQ Products contributes to human healthcare.

Our vision

To become a recognized innovative niche player in the fields of transplantation, perinatal diagnostics and routine clinical flow cytometry, IQ Products strongly relies on mutual relationship with customers and distributors, especially in the fields of product innovation and development. Maintaining and strengthening this is very important in order to translate ideas into dynamic product development and product innovation programs.

From quality to continuity

We aim to be successful by providing reliable products and skilled technical support. This is achieved by building strong relationships with our distributors and customers.

In all products and services, IQ Products is committed to the highest standards of quality, today and in the future. All activities are performed under a total quality system according to the ISO 13485 requirements. Diagnostic products are manufactured according to cGMP standards, as is demonstrated by the CE and FDA registration of our facility.

IQ Products supplies its products through direct sales in the Netherlands and Germany elsewhere this is through a highly dedicated distributor network.

Some unique products

CMV Brite™ Turbo

Rapid and reliable routine diagnosis of active CMV infection.

This complete antigenemia assay is the perfect tool for *In Vitro Diagnosis* (**IVD FDA** and **IVD CE**) and monitoring of active CMV infection and CMV treatment programs for instance in bone marrow recipients, solid organ transplant patients and HIV/AIDS patients.

This kit is competitive in sensitivity, specificity, hands-on-time and pricing to real-time nucleic acid amplification techniques.

Fetal Cell Count™

Routine detection of feto-maternal bleeding.

This patented flow cytometry assay for the diagnosis of Feto-maternal Hemorrhage (**IVD CE**) uses antibodies to fetal hemoglobin and

carbonic anhydrase antibodies enabling the discrimination of fetal red blood cells from maternal red blood cells that contain fetal hemoglobin. This makes the complete Fetal Cell Count™ kit a superior alternative to the cumbersome Kleihauer-Betke test.

Leuko64™

Innovative diagnosis of inflammation and/or sepsis.

This product (**IVD CE**) is outside the US and is exclusively distributed for Trillium Diagnostics (USA). The unique Leuko64™

kit takes advantage of the knowledge that neutrophil CD64 expression is negligible in the healthy state but is increased within 6 hours as a systemic response to inflammation, severe infection or sepsis. Using the Leuko64™ kit, inflammation and/or sepsis is rapidly detected, making it a highly suitable monitoring tool in diagnosis and treatment for in- and outpatients.

Macro163™

Measuring macrophage and monocyte activation using soluble CD163 as marker.

The Macro163™ kit is a soluble CD163 ELISA detection assay designed to screen for the presence of sCD163, an indicator for macrophage and monocyte activation. The assay is an ideal procedure to be used in applications like CD163 analysis in inflammation caused by infectious disease, possibly combined with measuring CD64 expression or detection of myeloproliferative diseases and hemophagocytic syndrome.

OEM

IQ Products has a long history of development of innovative diagnostic products. With our product expertise, our service and technical resource IQ Products has the ability to support your project.

Custom antibody production

Under our strict quality regime we offer antibody production, purification, or modification programs to meet your needs.

For information on how IQ Products can meet your specific OEM needs or custom antibody service contact our distributor or inquire to marketing@iqproducts.nl
